Today's Visit

(Screen shot of animation)
Large footprints show the overall areas visited, smaller footprints (using size and opacity) represent artifacts visited, how long you spent there and what was missed.

FOOTPRINT IDEAS

Using the under soles' track marks we experimented with the graphic representation of the patterns and began considering how they could show data and information. (*Variation 1)

(Screen shot of animation)
The lines on the bottom of the shoe are shaking and will stop when the user rolls over it. The lines/waves represent a piece in the exhibition.

Using bubbles in the shape of feet, to represent the content viewed and missed by the visitor. The user would be able to hover over the area and see further information on what they missed. The colours represent different areas within the museum.
Idea 1 experiments with opacity (to show areas missed)
Idea 2 visualises the 2nd visit (darker opacity)

(*Variation 2)

(*Variation 3)

Using the pattern on the sole of a shoe as a map, to show a visitors journey through the exhibition. Dark grey & blue shapes show touchpoints, blue shows what has been visited. Light grey is to fill pattern.
Idea 1 & 2 experiments with an effect on the different shapes

(Screen shot of animation)
Making the pattern on the sole of a shoe interactive. The shapes & colour represent data, click on cubes to find out specific data.

(*Variation 4)
