Figure 8: Mechanical properties vs strain predictions. (a) Directional PR predictions (curves) and experimental $\mathrm{VCR}=1$ (gradient foam) data (symbols) vs loading strain: $v_{\mathrm{xz}}$ and $v_{\mathrm{zx}}$ predictions for $\mathrm{h}_{\mathrm{xz}}=1.2,1_{\mathrm{xz}}=1, \mathrm{~b}_{\mathrm{xz}}=0.2$, $\theta_{\mathrm{xz}}=-0.1^{\circ}, \varphi=10^{\circ}$ and $\mathrm{K}_{\mathrm{hf}} / \mathrm{K}_{\mathrm{s}}=0.004\left(\mathrm{~K}_{\mathrm{f}} / \mathrm{K}_{\mathrm{h}}=9, \mathrm{~K}_{\mathrm{s}} / \mathrm{K}_{\mathrm{h}}=225\right) ; v_{\mathrm{xy}}$ predictions for $\mathrm{h}_{\mathrm{xy}}=1_{\mathrm{xy}}=1, \mathrm{~b}_{\mathrm{xy}}=0.2, \theta_{\mathrm{xy}}=$ $30^{\circ}, \varphi=0^{\circ}$ and $\mathrm{K}_{\mathrm{hf}} / \mathrm{K}_{\mathrm{s}}=0.3\left(\mathrm{~K}_{\mathrm{f}} / \mathrm{K}_{\mathrm{h}}=9, \mathrm{~K}_{\mathrm{s}} / \mathrm{K}_{\mathrm{h}}=3\right)$; (b) Directional Young's moduli (normalised to undeformed $\mathrm{E}_{\mathrm{x}}$ ) predictions (curves) and experimental data (symbols) vs loading strain: model parameters as for (a). The $\mathrm{E}_{\mathrm{x}}$ (x-z fit) model expression is shown as an exemplar.
