Figure 1: Hierarchy of evidence (Evans, 2003, p79)

Figure 2: Evidence-based practice methodology (Moule, 2015)

- 1. Identifying a clinical problem and turning it into a specific question
- 2. Finding the best available evidence that relates to the specific question, usually by systematically searching the literature
- 3. Appraising the evidence for its validity, usefulness and methodological rigour
- 4. Identifying current best practice and, together with the client's preferences, apply it to the clinical situation
- 5. Evaluating the effect on the client and the practitioner's own performance
