Figure 1. Baseline distribution of multimodal metrics in patients undergoing radical cystectomy.
Figure 2. Changes in quantified activity levels, exercise capacity and patient reported disability and QOL during recovery from radical cystectomy.
Supplementary figure 1. a). Recruitment and collection of data within iROC. B). Primary outcome measure (Days alive and out of hospital) and Length of stay within iROC.
Supplementary figure 2. Actual (red) and estimated (grey) recruitment within iROC. The first 30 patient threshold is shown as an orange line.
