 93 **Supplementary Table 1: Guidelines for Accurate and Transparent Health Estimates Reporting**
 94 **(GATHER) checklist**

Item #	Checklist item	Reported on page #
Objectives and funding		
1	Define the indicator(s), populations (including age, sex, and geographic entities), and time period(s) for which estimates were made.	Main text: Introduction, Methods (Data)
2	List the funding sources for the work.	Main text: Acknowledgments
Data Inputs		
<i>For all data inputs from multiple sources that are synthesized as part of the study:</i>		
3	Describe how the data were identified and how the data were accessed.	Main text: Methods (Data, Data availability), Supplementary section 2.0
4	Specify the inclusion and exclusion criteria. Identify all ad-hoc exclusions.	Main text: Methods (Data exclusion criteria), Supplementary Information: 2.0
5	Provide information on all included data sources and their main characteristics. For each data source used, report reference information or contact name/institution, population represented, data collection method, year(s) of data collection, sex and age range, diagnostic criteria or measurement method, and sample size, as relevant.	Supplementary Information: 2.0
6	Identify and describe any categories of input data that have potentially important biases (e.g., based on characteristics listed in item 5).	Main text: Methods (Limitations)
<i>For data inputs that contribute to the analysis but were not synthesized as part of the study:</i>		
7	Describe and give sources for any other data inputs.	Main text: Methods (Data: Spatial covariates), Supplementary Information: 2.0 Supplementary covariates
<i>For all data inputs:</i>		
8	Provide all data inputs in a file format from which data can be efficiently extracted (e.g., a spreadsheet rather than a PDF), including all relevant meta-data listed in item 5. For any data inputs that cannot be shared because of ethical or legal reasons, such as third-party ownership, provide a contact name or	(GHDx link available upon publication) Supplementary Information: 2.0

	the name of the institution that retains the right to the data.	
Data analysis		
9	Provide a conceptual overview of the data analysis method. A diagram may be helpful.	Main text: Methods (Data)
10	Provide a detailed description of all steps of the analysis, including mathematical formulae. This description should cover, as relevant, data cleaning, data pre-processing, data adjustments and weighting of data sources, and mathematical or statistical model(s).	Main text: Methods (Analysis), Supplementary Information: 4.1 Geostatistical model.
11	Describe how candidate models were evaluated and how the final model(s) were selected.	Main text: Methods (Analysis: Model validation), Supplementary Information: 5.0 Model Result and 6.0 Model validation.
12	Provide the results of an evaluation of model performance, if done, as well as the results of any relevant sensitivity analysis.	Main text: Methods (Analysis), Supplementary Information: 5.0 Model Result and 6.0 Model validation.
13	Describe methods for calculating uncertainty of the estimates. State which sources of uncertainty were, and were not, accounted for in the uncertainty analysis.	Main text: Methods (Analysis: Geostatistical model), Supplementary Information: 5.0 Model Result and 6.0 Model validation.
14	State how analytic or statistical source code used to generate estimates can be accessed.	(GHDx link available upon publication)
Results and Discussion		
15	Provide published estimates in a file format from which data can be efficiently extracted.	Raster files for spatial data and CSVs of estimates available at (GHDx link available upon publication)
16	Report a quantitative measure of the uncertainty of the estimates (e.g., uncertainty intervals).	Supplementary Information: 5.0 Model Result and 6.0 Model validation.
17	Interpret results in light of existing evidence. If updating a previous set of estimates, describe the reasons for changes in estimates.	Main text: Results and Discussion sections.
18	Discuss limitations of the estimates. Include a discussion of any modelling assumptions or data limitations that affect interpretation of the estimates.	Main text: Methods (Limitations)

96 **2.0 Supplementary data**

97 We modelled the prevalence of anaemia among women of reproductive age (WRA; ages 15–49) in 82 low- and middle-income
 98 countries (LMICs) from 2000 to 2018, and stratified by anaemia severity. These countries were determined by their Socio-
 99 demographic Index (SDI), a summary measure of development which combines education, fertility, and poverty, developed and
 100 computed by the Global Burden of Disease (GBD) study¹. Malaysia, China, and Iran were included despite high-middle SDI status to
 101 create better geographic continuity. Albania, Bosnia-Herzegovina, North Korea, and Moldova were excluded despite their middle SDI
 102 status due to geographic discontinuity with other included countries and lack of available survey data. We did not estimate for the
 103 island nations of American Samoa, Federated States of Micronesia, Fiji, Kiribati, Marshall Islands, Samoa, Solomon Islands, or Tonga,
 104 where no available survey data could be sourced.

105
 106 The list of data sources used to model anaemia can be found in the Global Health Data Exchange by Number Identification (ID):
 107 http://ghdx.healthdata.org/lbd-publication-data-input-sources?field_rec_ihme_publication_tid=29140.

108
 109 **Supplementary Table 2: Summary of data source geographical resolution, and haemoglobin assessment methods**

	Microdata (Point) Sources			Administrative (Polygonal) Sources			Total
	Venous Draw	Capillary Draw	Unknown	Venous Draw	Capillary Draw	Unknown	
Hemocue	115	5	4	11	20	2	157
Centrifuge/Hematocrit	1	0	0	2	1	0	4
Dried blood spot	1	0	0	0	1	0	2
Liquid blood & Spectral	0	1	0	2	0	2	5
Unknown	2	0	5	10	3	22	42
Total	119	6	9	25	25	26	210
Spatial Resolution Total	134			76			

110
 111 136 sources gave raw haemoglobin values (135 microdata surveys and 1 administrative data survey) and 74 sources reported
 112 categorically binned data (74 administrative data surveys). Country-specific surveys made up 12 of the 135 microdata sources used in

113 the models, consisting of National Nutrition surveys and Demographic and Family Health surveys from Latin America and Pakistan,
114 and the Indonesia Family Life Survey.

115
116 18 of 75 administrative data reports were sourced from the GHDx, and 57 reports were gathered from a systematic literature review of
117 31,821 search results on PubMed. Testing increasingly targeted search strings against broader search results' accepted sources allowed
118 us to hone the number of papers reviewed down. China's 15,675 search results were narrowed to 2982 using our optimised search
119 string, resulting in more accepted administrative data sources than from any other country.

Smoking status	Measured haemoglobin adjustments (g/L)
Non-smoker	0
Smoker (all)	-0.3
½–1 Packet/day	-0.3

1–2 Packet/day	-0.5
≥2 Packet/day	-0.7

129

130 Supplementary Table 7: Smoking and elevation adjusted haemoglobin level definitions to diagnose anaemia (g/L)³⁷

Population	Non-anaemic	Mild anaemia	Moderate anaemia	Severe anaemia
Non-pregnant women	≥120	110–119	80–109	<80
Pregnant women	≥110	100–109	70–99	<70

131

132

133 Supplementary Figures 1–5 show the data availability for anaemia in the 82 countries in our analysis. We incorporated data from
 134 several survey series, including the Demographic and Health Survey by Macro International (Macro DHS), the Malaria Indicator
 135 Survey (MACRO-MIS), United Nations International Children’s Emergency Fund (UNICEF MICS), the Pan Arab Programme on Family
 136 Health survey by League of Arab States (PAPFAM), the Living Standards Measurement Study by World Bank (LSMS), the Family Life
 137 Survey by RAND Corporation (RAND FLS), the Reproductive Health Survey by Center for Disease Control (CDC RHS), the Demographic
 138 and Health Survey for Pacific countries funded by the Asian Development Bank (ADB DHS), and country-specific surveys that were
 139 not clearly associated with an international survey series. We regularly monitored larger survey series such as Macro DHS and
 140 UNICEF MICS for new data. We also included data from scientific literature by conducting a systematic literature review. We
 141 searched PubMed for articles published after January 1, 1998 with the following key terms: “haemoglobin”, “anaemia”, and
 142 “haematocrit”. First, we did a title/abstract screen of the PubMed search results to remove publications that did not report anaemia
 143 prevalence in women of reproductive age. We then did a full text review of the remaining articles to ensure the data met the
 144 inclusion criteria. We manually extracted data from the accepted publications into Excel spreadsheets. The database for anaemia
 145 consists of 218 geo-referenced household surveys representing over 3 million WRA in LMICs.

206
207

Supplementary Figure 7: Years of data informing administrative level two units

The number of years of extracted data (during 2000–2018) within each administrative level one unit. This figure only illustrates the number of years of observed data and not the sample size or volume of the data. The majority of the data sources contained point-referenced data and those that did not primarily contained data that was representative for administrative level one polygons. Polygonal data was resampled to points, and, as such, this second-level data volume map may suggest more data than was available at each of these administrative units. For a more representative illustration of the data volume used in this study, please see Supplementary Figure 6.

270 **Supplementary Table 15: Anaemia fitted parameters**

271 Lower, median, and upper quantiles (percentiles 0.025, 0.50, 0.975) are displayed for the main parameters from the models by region. The fixed
 272 effects covariates corresponding to the predicted ensemble rasters are shown in the first five columns, while fitted values for the spatiotemporal
 273 field hyperparameters and the precisions (inverse variance) for our random effects are shown in the last five columns.

303 *6.1 Anaemia validation metrics*

304 **Supplementary Table 16: Predictive metrics for anaemia aggregated to admin 0**

305 The out-of-sample (OOS) column indicates whether the metric was calculated using in-sample
306 or out-of-sample predictions. Mean error, root-mean-squared-error (RMSE), correlation (Corr)
307 and coefficient of variation (Cov) are in proportion.
