Review and update of the Health of the Nation Outcome Scales for People with Learning Disabilities (HoNOS-LD)

Dr Jon Painter Prof Rohit Shankar

Background

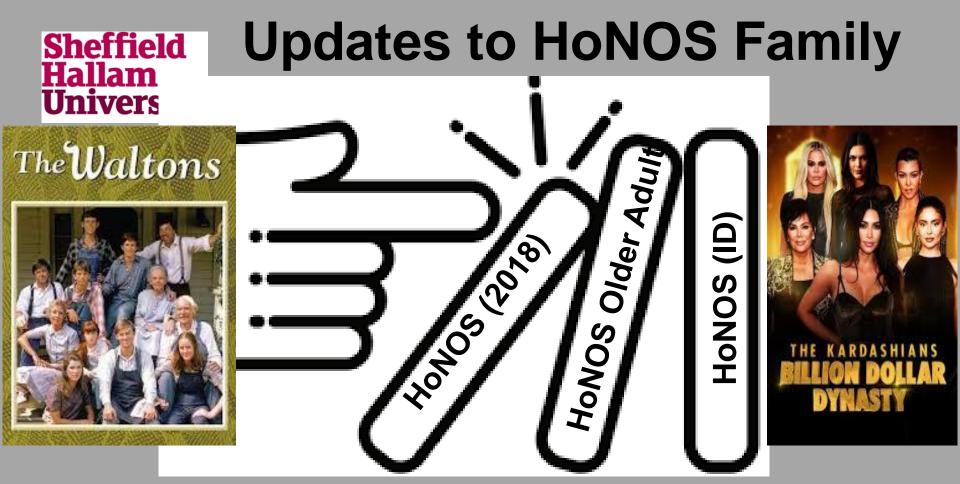

- Health of the Nation Outcomes Scale (HoNOS) developed in 1996 by Wing et al.
- Designed to measure the health and social care outcomes of working aged adults in receipt of secondary care mental health services
- 12 items each rated on a 0-4 severity scale

Overactive, disruptive or agitated behaviour	Depressed mood
Non-accidental self-injury	Other behavioural & mental problems
Problem Drinking or drug taking	Problems with relationships
Cognitive problems	Problems with ADLs
Physical health or disability	Problems with living conditions
Hallucinations & delusions	Problems with occupation & activities

Health of the Nation Outcome Scales for People with Learning Disabilities (HoNOS–LD) Ashok Roy, Helen Matthews, Paul Clifford, Vanessa Fowler, David M. Martin

- Developed in 2002
- Like most versions, as a result of testing the HoNOS in a different clinical setting, and encountering issues when capturing key clinical issues (eg communication skills & movement disorders)
- Key differences include:
 - 18 items (not 12)
 - Different 0-4 severity scale
 - 4-week rating period (not 2 weeks)

Overactive, aggressive, disruptive or agitated behaviour Behavioural problems (directed at others) probs	HoNOS (1996)	HoNOS-LD (2002)	0 No	1 Mild probs	2 Moderate probs	3 Severe probs

Update process

Convene Expert Advisory Board and set ToR for the HoNOS-LD review

Aim: To review and improve the HoNOS-LD's utility in contemporary intellectual disability services whilst retaining its original objectives and five-point severity ratings

Advisory Board Membership								
Name	Profession	Affiliation	Country					
Mick James	Registered Mental	Royal College of Psychiatrists	England					
	Health Nurse	(National HoNOS Advisor)						
Jon Painter	Registered Nurse LD	Sheffield Hallam University	England					
	& Registered Mental	(HoNOS & HoNOS 65+ EAG member)						
	Health Nurse							
Ashok Roy	Psychiatrist	Coventry and Warwickshire Partnership Trust	England					
		(HoNOS-LD author)						
Rohit Shankar	Neuropsychiatrist	University of Plymouth	England					
Barry Ingham	Clinical Psychologist	Cumbria, Northumberland, Tyne and Wear NHS FT	England					
Mark Smith	Clinical Lead	Te Pou	NZ					
Nicola Adams	Nurse Educator	Te Pou	NZ					
Sandra Baxendale	Information analyst	Te Pou	NZ					

Changes needed to result in a tangible improvement (e.g. simplification/ clarification/ removal of anachronisms) and:

- maintain the original instrument's integrity as far as possible.
- maximize comparability with existing individual and aggregated data.
- support the use of HoNOS-LD as a summary of clinical assessment(s).
- adhere to the HoNOS-LD 'core rules': |
 - Each item is a behaviourally anchored five-point scale.
 - Items are sequentially rated (1–18).
 - All available information is used to make a rating.
 - Information already rated in an earlier item is disregarded.
 - The most severe problem/worst manifestation from the preceding 4weeks is rated.
 - Problems are rated according to the degree of distress caused and/or its impact on behaviour.
 - Must be rated by a mental health professional trained in clinical assessment. problems are rated regardless of cause.

Consent

Demographics

Experience with HoNOS-LD

For the overarching HoNOS-LD instruction page, and each of the subsequent 18 scales, the original text was presented followed by four questions:

(i) What could be changed to simplify this part of the tool?

- (ii) What could be changed to reduce ambiguity in this part of the tool?
- (iii) Is there any language in this section that is now outdated in the context of contemporary practice?
- (iv) Overall, this section is fit for purpose (a five-point Likert scale from 'strongly disagree' 'strongly agree').

Online survey of HoNOS-LD users

Online survey of HoNOS-LD users

	Respondents Attributes	Respondents Attributes					
Country of practice	United Kingdom						
	New Zealand						
Clinical Setting	Exclusively inpatient						
	Exclusively community/outpatie	ent	43				
	Inpatient & Outpatient						
Nature of usage	Clinical practice		70				
	HoNOS-LD training		9				
	Macro-level (eg service evaluati	on)	9				
	Research		5				
	Other						
Profession	Nurse		37				
	Psychiatrist						
	Psychologist		9				
	Speech & Language Therapist		8				
	Occupational Therapist		6				
	Physiotherapist		2				
	Behavioural Specialist		2				
Confidence in ability to	Very confident						
provide helpful insights	Confident						
	Somewhat confident						
	Not confident		3				
Mean duration of practice	in LD	16.8yrs (SD 10	0.1yrs)				
Mean duration of HoNOS	LD use	8.0yrs (SD 5.	28yrs)				

RAG rating responses

HoNOS-LD	Issues	Issues raised by survey respondents					
scale	identified in	Red = out of scope, not to be discussed					
	published	Amber= to be discussed					
	literature	Green = def in scope					
1 – Behaviour	Nil	- Subjectivity of terms used					
toward others		 frequency not well-defined 'occasional' and 'frequent' can be open to interpretation (53) (49) (77) (55) (35) (76) 'pestering,' 'harassment,' 'quarrelsome' - outdated, subjective, lacking empathy, negative, not commonly used (46) (53) (76) (77) (35) (44) 'Casualty' an ambiguous term (44) (45) (77) The use of the word behavioural 'problems' (11) (38) (79) (51) - should be renamed as 'behaviours of concern' Phrasing indicates that the patient is the problem (49) (76) (51) (62) 'requiring physical interventions' – assumes physical interventions' – assumes physical intervention always appropriately used (76) Ratings do not reflect whether risk is managed i.e. use of medication is required to prevent aggression (34) (35) The threat of aggression is not included (62) (95) Subjectivity of the assessment of risk (62) (51) Does not separate risk from actual occurrence/events (76) 					

	Overall, this section is fit for purpose						Simplifications? Ambiguities?

Scale 18	0	4	9	12	1	26	15	50	11	8	7

Example updates

- Clarifying that scale 2 should capture self-harming and selfinjurious behaviours, regardless of motivation
- Clarifying that dysphagia is to be included in scale 11
- Replacing the term 'fits' with 'seizures'
- Replacing "Learning Disability" with "Intellectual Disability"
- Highlighting that it is the person's (not the rater's) culture that must be considered when rating items
- Lots of linguistic changes to improve consistency of severity ratings across items AND with other members of the 'HoNOS family'

Conclusion

- HoNOS –ID addresses many, but not all, issues raised about the HoNOS-LD
- Some suggestions were simply out of scope
- HoNOS-ID is already being introduced in some services
- HoNOS-ID is a better and more contemporary tool with which to capture clinical outcomes
- HoNOS-ID use provides new opportunities to research, analyse, and publish from the resulting data sets
- HoNOS-ID needs you!
