Supplementary Data

Tables

- S1** Goodness-of-fit statistics for quadratic and cubic models for pain trajectory, all participants (n=449)
- S2** Model constraints applied to the 6-group GMM model
- S3** Pain scale: goodness-of-fit statistics for a cubic GMM model with the variance of the cubic and quadratic term fixed at 0
- S4** Goodness-of-fit statistics for quadratic and cubic models for pain trajectory, diagnosed osteoarthritis only (n=187)
- S5** Differences in baseline characteristics by pain trajectory group, expressed relative risk ratios from multinomial logistic regression, all participants
- S6** Differences in outcomes by trajectory group, expressed as relative risk ratios from multinomial logistic regression, all participants

Figures

- S1** Plots of estimated means of the final model and the observed individual trajectories, by pain trajectory group, all participants
- S2** Trajectory plots of the constrained GMM model with varying numbers of groups (i.e., with the variance of the cubic and quadratic terms constrained at 0)
- S3** Pain score by group-based trajectory membership, diagnosed osteoarthritis only (n=187)
- S4** Pain interference with participant-nominated activity (■), by pain (○) trajectory group, all participants
- S5** Stiffness (■), by pain (○) trajectory group, all participants
- S6** Swelling (■), by pain (○) trajectory group, all participants

Supplementary Table 1

Goodness-of-fit statistics for quadratic and cubic models for pain trajectory, all participants (n=449)

Model	No of class	AIC	BIC	ABIC	Entropy	L	Sample size in each class, n (%)	Average posterior probability
Quadratic	1	-5853.85	-5862.70	-5860.01		-5850.85	449 (100)	1
	2	-5419.54	-5440.18	-5433.91	.8055834	-5412.54	160 (35.6), 289 (64.4)	0.91, 0.96
	3	-5317.45	-5349.89	-5340.04	.7762766	-5306.45	56 (12.5), 220 (49.0), 173 (38.5)	0.91, 0.88, 0.89
	4	-5300.87	-5345.11	-5331.67	.7777202	-5285.87	22 (4.9), 62 (13.8), 226 (50.3), 139 (31.0)	0.91, 0.83, 0.84, 0.90

AIC, Akaike Information Criteria; BIC, Bayesian Information Criteria; ABIC, Sample-size adjusted BIC; L, Log likelihood.

Supplementary Table 2 Model constraints applied to the 6-group cubic GMM model

Model	Constraint			Outcome
	Residual variances to be constrained to be equal across trajectory classes and time-points	Variance around the cubic term constrained to be equal to 0	Variance around the quadratic term constrained to be equal to 0	
GMM1	No	No	No	Best log likelihood not replicated
GMM2	Yes	No	No	Best log likelihood not replicated
GMM3	No	Yes	No	Best log likelihood not replicated
GMM4	Yes	Yes	No	Model could not be fully estimated under the model constraints listed
GMM5	No	Yes	Yes	Best log likelihood replicated

Footnote: The GMM models are fitted using Mplus version 8.1. GMM, Growth Mixture Model.

Supplementary Table 3

Pain scale: goodness-of-fit statistics for a cubic GMM model with the variance of the cubic and quadratic term fixed at 0

No of groups	AIC	BIC	ABIC	Entropy	L	Sample size in each class, n (%)	Average posterior probability
1	9182	9235	9194		-4578	449 (100)	1.00
